Registration No: 25BAI10630
Branch: Computer Science (AI & ML)
Course Code: CSE0001
Course Title: Digital Literacy
Date: 25/march/2026

1. Introduction

This project focuses on digital literacy and its importance for students in today's digital world. As a Digital Ambassador, I explored various tools and platforms that help in building a professional online presence and ensuring safe internet usage. The project includes creating an infographic, building online profiles, exploring coding platforms, writing professional emails, and understanding cybercrime awareness. This project helped me improve my digital skills and awareness.

2. Task 1

I created a digital literacy infographic using Canva. The infographic explains the meaning of digital literacy, safe internet practices, useful tools, and email etiquette. I used simple colors and icons to make the design visually appealing and easy to understand. The infographic helps students understand how to use digital tools safely and effectively. The most interesting part of this task was designing the layout, while the challenging part was selecting the right content to include within limited space.

3. Task 2

I created profiles on GitHub, LinkedIn, and Kaggle. GitHub is used to showcase projects and coding work, LinkedIn helps in professional networking, and Kaggle is useful for learning data science and participating in competitions. These platforms are important for building a strong digital presence. Over the next four years, I plan to use these platforms to improve my technical skills, connect with professionals, and build my portfolio for future career opportunities.

4. Task 3

In this task, I explored coding and collaboration platforms. I solved a beginner-level problem on HackerRank, which helped me understand basic programming concepts. I also created a Google Form quiz on digital literacy and collected responses. This task helped me learn how to use online tools for problem-solving and data collection. These tools will be very useful for my academic work and collaboration with others.

5. Task 4

Professional communication is very important in the digital world. In this task, I learned how to write formal emails with proper structure and tone. Poor digital communication can cause misunderstandings. For example, sending unclear or informal emails can create confusion. By following proper email etiquette, we can communicate clearly and professionally. This helps in building a positive impression and avoiding problems.

6. Task 5

While researching cybercrime, I learned about phishing and how easily people can be tricked into sharing personal information. It was surprising to see how common these attacks are. This task made me more aware of online safety. I will now be

more careful while clicking links and sharing personal data. I will also follow safe practices like using strong passwords and verifying sources.

7. Conclusion

This project helped me understand the importance of digital literacy and how to use digital tools effectively and safely. I learned about building a professional online presence, practicing coding, and maintaining proper communication. It also increased my awareness about cybercrime and online safety. Overall, this project improved my confidence and digital skills, which will be useful in my academic and professional journey.
